Advanced Protocols in Oxidative Stress III (Methods in Molecular Biology)

Advanced Protocols in Oxidative Stress III (Methods in Molecular Biology)

Advanced Protocols in Oxidative Stress III continues the thread of the first two books by covering technology ranging from a portable hand-held detector for remote analysis of antioxidant capacity to sophisticated technology such as shotgun lipidomics, mitochondrial imaging, nano sensors, fluorescent probes, chromatographic fingerprints, computational models and bio statistical applications. Several chapters have shown the effect of pro-oxidation and antioxidants as inflammatory mediators in signaling pathways leading from the initial stimulus to termination through redox cycles. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls.

Comprehensive and practical, *Advanced Protocols in Oxidative Stress III* offers to save investigators significant time and effort, allowing them to focus on their own personal topic of interest.
