A Guide to Temporal Networks (Series on Complexity Science)

Naoki Masuda, Renaud Lambiotte

A Guide to Temporal Networks (Series on Complexity Science) Naoki Masuda, Renaud Lambiotte

Network science offers a powerful language to represent and study complex systems composed of interacting elements — from the Internet to social and biological systems. In its standard formulation, this framework relies on the assumption that the underlying topology is static, or changing very slowly as compared to dynamical processes taking place on it, e.g., epidemic spreading or navigation. Fuelled by the increasing availability of longitudinal networked data, recent empirical observations have shown that this assumption is not valid in a variety of situations. Instead, often the network itself presents rich temporal properties and new tools are required to properly describe and analyse their behaviour.

A Guide to Temporal Networks presents recent theoretical and modelling progress in the emerging field of temporally varying networks, and provides connections between different areas of knowledge required to address this multi-disciplinary subject. After an introduction to key concepts on networks and stochastic dynamics, the authors guide the reader through a coherent selection of mathematical and computational tools for network dynamics. Perfect for students and professionals, this book is a gateway to an active field of research developing between the disciplines of applied mathematics, physics and computer science, with applications in others including social sciences, neuroscience and biology.

From reader reviews:

Maurice Neely:

Now a day folks who Living in the era where everything reachable by interact with the internet and the resources in it can be true or not call for people to be aware of each data they get. How many people to be smart in obtaining any information nowadays? Of course the solution is reading a book. Looking at a book can help persons out of this uncertainty Information especially this A Guide to Temporal Networks (Series on Complexity Science) book as this book offers you rich information and knowledge. Of course the information in this book hundred pct guarantees there is no doubt in it everybody knows.

Robert Eslinger:

Reading a book for being new life style in this 12 months; every people loves to read a book. When you learn a book you can get a large amount of benefit. When you read textbooks, you can improve your knowledge, due to the fact book has a lot of information in it. The information that you will get depend on what forms of book that you have read. In order to get information about your study, you can read education books, but if you want to entertain yourself read a fiction books, this kind of us novel, comics, and soon. The A Guide to Temporal Networks (Series on Complexity Science) will give you new experience in reading a book.

Dixie Jones:

In this period of time globalization it is important to someone to get information. The information will make anyone to understand the condition of the world. The healthiness of the world makes the information easier to share. You can find a lot of personal references to get information example: internet, newspaper, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. The particular book that recommended for your requirements is A Guide to Temporal Networks (Series on Complexity Science) this publication consist a lot of the information from the condition of this world now. This book was represented just how can the world has grown up. The dialect styles that writer value to explain it is easy to understand. Typically the writer made some research when he makes this book. That is why this book ideal all of you.

Tonya Quick:

Reading a e-book make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is created or printed or highlighted from each source that will filled update of news. On this modern era like currently, many ways to get information are available for anyone. From media social such as newspaper, magazines, science guide, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just looking for the A Guide to Temporal Networks (Series on Complexity Science) when you desired it?
