Groundwater Recharge in a Desert Environment: The Southwestern United States (Water Science and Application)

Groundwater Recharge in a Desert Environment: The Southwestern United States (Water Science and Application)

Published by the American Geophysical Union as part of the Water Science and Application Series, Volume 9.

Groundwater recharge, the flux of water across the water table, is arguably the most difficult component of the hydrologic cycle to measure. In arid and semiarid regions the problem is exacerbated by extremely small recharge fluxes that are highly variable in space and time.

--from the Preface

Groundwater Recharge in a Desert Environment: The Southwestern United States speaks to these issues by presenting new interpretations and research after more than two decades of discipline-wide study. Discussions on developing environmental tracers to fingerprint sources and amounts of groundwater at the basin scale, the critical role of vegetation in hydroecological processes, new geophysical methods in quantifying channel recharge, applying Geographical Information System (GIS) models to land surface processes, coupling process-based vadose zone to groundwater modeling, and more make this book a significant resource for hydrologists, biogeoscientists, and geochemists concerned with water and water-related issues in arid and semiarid regions.

From reader reviews:

Terrance Allen:

This book untitled Groundwater Recharge in a Desert Environment: The Southwestern United States (Water Science and Application) to be one of several books that best seller in this year, this is because when you read this book you can get a lot of benefit in it. You will easily to buy this specific book in the book store or you can order it by means of online. The publisher on this book sells the e-book too. It makes you quickly to read this book, since you can read this book in your Touch screen phone. So there is no reason to your account to past this publication from your list.

Teresa Propst:

People live in this new day of lifestyle always try and and must have the spare time or they will get lots of stress from both lifestyle and work. So , whenever we ask do people have time, we will say absolutely sure. People is human not really a huge robot. Then we consult again, what kind of activity have you got when the spare time coming to anyone of course your answer may unlimited right. Then do you try this one, reading textbooks. It can be your alternative in spending your spare time, typically the book you have read is Groundwater Recharge in a Desert Environment: The Southwestern United States (Water Science and Application).

Michael Becker:

Can you one of the book lovers? If so, do you ever feeling doubt if you find yourself in the book store? Attempt to pick one book that you just dont know the inside because don't evaluate book by its handle may doesn't work this is difficult job because you are frightened that the inside maybe not since fantastic as in the outside search likes. Maybe you answer might be Groundwater Recharge in a Desert Environment: The Southwestern United States (Water Science and Application) why because the excellent cover that make you consider about the content will not disappoint you. The inside or content is actually fantastic as the outside as well as cover. Your reading sixth sense will directly show you to pick up this book.

Thomas Schroeder:

What is your hobby? Have you heard this question when you got scholars? We believe that that problem was given by teacher to the students. Many kinds of hobby, All people has different hobby. And you also know that little person such as reading or as looking at become their hobby. You need to understand that reading is very important and book as to be the matter. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You discover good news or update with regards to something by book. Numerous books that can you choose to use be your object. One of them is Groundwater Recharge in a Desert Environment: The Southwestern United States (Water Science and Application).
