Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health)

George J. Knafl, Kai Ding

Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) George J. Knafl, Kai Ding

This book presents methods for investigating whether relationships are linear or nonlinear and for adaptively fitting appropriate models when they are nonlinear. Data analysts will learn how to incorporate nonlinearity in one or more predictor variables into regression models for different types of outcome variables. Such nonlinear dependence is often not considered in applied research, yet nonlinear relationships are common and so need to be addressed. A standard linear analysis can produce misleading conclusions, while a nonlinear analysis can provide novel insights into data, not otherwise possible.

A variety of examples of the benefits of modeling nonlinear relationships are presented throughout the book. Methods are covered using what are called fractional polynomials based on real-valued power transformations of primary predictor variables combined with model selection based on likelihood cross-validation. The book covers how to formulate and conduct such adaptive fractional polynomial modeling in the standard, logistic, and Poisson regression contexts with continuous, discrete, and counts outcomes, respectively, either univariate or multivariate. The book also provides a comparison of adaptive modeling to generalized additive modeling (GAM) and multiple adaptive regression splines (MARS) for univariate outcomes.

The authors have created customized SAS macros for use in conducting adaptive regression modeling. These macros and code for conducting the analyses discussed in the book are available through the first author's website and online via the book's Springer website. Detailed descriptions of how to use these macros and interpret their output appear throughout the book. These methods can be implemented using other programs.

From reader reviews:

Dewey Newkirk:

As people who live in typically the modest era should be up-date about what going on or data even knowledge to make them keep up with the era that is always change and move forward. Some of you maybe can update themselves by reading through books. It is a good choice to suit your needs but the problems coming to you actually is you don't know which you should start with. This Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) is our recommendation to make you keep up with the world. Why, since this book serves what you want and want in this era.

Hal Clemens:

The guide with title Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) has lot of information that you can study it. You can get a lot of benefit after read this book. This kind of book exist new expertise the information that exist in this book represented the condition of the world right now. That is important to you to understand how the improvement of the world. That book will bring you throughout new era of the glowbal growth. You can read the e-book in your smart phone, so you can read this anywhere you want.

Ann Gonzalez:

A lot of people always spent all their free time to vacation or even go to the outside with them family or their friend. Do you know? Many a lot of people spent they free time just watching TV, or perhaps playing video games all day long. If you want to try to find a new activity this is look different you can read the book. It is really fun in your case. If you enjoy the book that you read you can spent the whole day to reading a publication. The book Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) it is very good to read. There are a lot of people that recommended this book. They were enjoying reading this book. Should you did not have enough space to deliver this book you can buy the e-book. You can m0ore very easily to read this book from your smart phone. The price is not very costly but this book features high quality.

Constance Music:

Reading can called brain hangout, why? Because while you are reading a book particularly book entitled Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) your brain will drift away trough every dimension, wandering in every single aspect that maybe unknown for but surely can be your mind friends. Imaging every word written in a publication then become one type conclusion and explanation that maybe you never get just before. The Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) giving you yet another experience more than blown away the mind but also giving you useful details for your better life on this era. So now let us explain to you the relaxing pattern is your body and mind are going to be pleased when you are finished examining it, like

winning an activity. Do you want to try this extraordinary spending spare time activity?
